Re: Update from **BRAD PENN®** Technical Services Department

Dear **BRAD PENN®** Distributor:

The American Refining Group, Inc. Sales and Marketing Dept. is pleased to announce an update to our Metalworking product line.

BRAD PENN® Anti-Rust CI (#7950), and the existing **BRAD PENN® Penn-Grade RP (Rust Preventive) 150** (#9001) are solvent-cutback rust preventive/corrosion inhibitor formulations ideally suited to protect both ferrous and non-ferrous parts during indoor storage, packaged shipment and interprocess handling. A solvent carrier is incorporated for ease of application. As the solvent evaporates it leaves behind a thin, highly "protective" film.

BRAD PENN® Penn-Grade RP 150 has the ability to protect treated parts (indoor protection only) for a period of up to 24 months. Its protective film will not crack or peel when exposed to ambient temperature swings. Additionally, **BRAD PENN® Penn-Grade RP 150** provides excellent water displacement characteristics and removal of fingerprints (acid neutralization). The new **BRAD PENN® Anti-Rust CI** is designed primarily for use under similar indoor storage conditions as our **BRAD PENN® Penn-Grade RP 150** where metal protection requirements are limited to a maximum of 12 months.

Detailed product information is located under the Metalworking section of our American Refining Group products website www.amref.com. Should you have any questions regarding this information, please contact your Regional Sales Manager or **BRAD PENN®** Technical Services Department.
